04 Performance Task 1

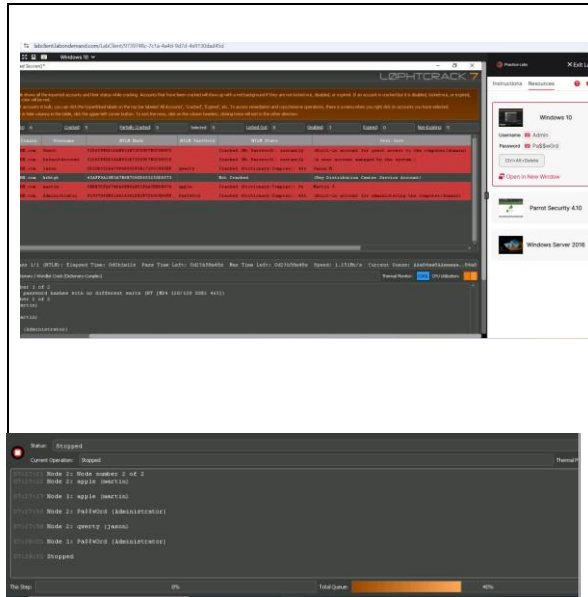

• Internet connection • EC-Council lab access Procedure (100 points)

1. Sign in to your EC-Council lab account at <https://eccouncil.learnondemand.net/>
2. Open the Ethical Hacking Essentials course.
3. Launch the Password Cracking Techniques and Countermeasures lab.
4. Click Next until you are in Lab 2: Audit System Passwords

INSTRUCTION:

Task 1: Audit System Passwords using L0phtCrack L0phtCrack is a tool designed to audit passwords and recover applications. It recovers lost Microsoft Windows passwords with the help of a dictionary, hybrid, rainbow table, and brute-force attacks. It can also be used to check the strength of a password. In this lab, you will be running the L0phtCrack tool by providing the remote machine's administrator with user credentials. User account passwords that are cracked in a short amount of time are weak, meaning that you need to take certain measures to strengthen them. Here, we will audit system passwords using L0phtCrack. 1. In this Windows 10 machine, click Ctrl+Alt+Delete and select Admin account and click Pa\$\$w0rd to paste the password in the Password field and press Enter to login. 2. Alternatively, you can also click Pa\$\$w0rd under Windows 10 machine thumbnail in the Resources pane or Click Type Text | Type Password button under Commands (thunder icon) menu. 3. Welcome to Windows wizard appears, click Continue and in Sign in with Microsoft wizard, click Cancel. 4. If Networks screen appears, click Yes to allow your PC to be discoverable by other PCs and devices on the network. 5. Navigate to D:\EHE-Tools\EHE Module 04 Password Cracking Techniques and Countermeasures>Password Cracking Tools\L0phtCrack; doubleclick lc7setup_v7.1.5_Win64.exe. 6. If a User Account Control pop-up appears, click Yes. 7. L0phtCrack starts loading; once the loading completes, the L0phtCrack Setup window appears; click Next. 8. Follow the wizard-driven installation steps to install L0phtCrack. 9. After completing the installation, the Completing L0phtCrack 7 (Win64) Setup wizard appears. Ensure that the Run L0phtCrack 7 (Win64) checkbox is selected and click Finish. 10. The L0phtCrack 7 - Trial pop-up appears; click the Proceed With Trial button. IT2501 04 Performance Task 1 *Property of STI Page 2 of 3 11. If an Update Available pop-up window appears, then click Skip

This Update. 12. In the next wizard, click the Password Auditing Wizard button. 13. The LC7 Password Auditing Wizard window appears; click Next. 14. In the Choose Target System Type wizard, ensure that the Windows radio button is selected and click Next. 15. In the Windows Import wizard, select the A remote machine radio button and click Next. 16. In the Windows Import From Remote Machine (SMB) wizard, type in the below details: o Host: 10.10.1.16 (IP address of the remote machine [Windows Server 2016]) o Select the Use Specific User Credentials radio button. In the Credentials section, type the login credentials of the Windows Server 2016 machine (Username: Administrator; Password: Pa\$\$w0rd). o If the machine is under a domain, enter the domain name in the Domain section. Here, Windows Server 2016 belongs to the EHE.com domain. 17. Once you have entered all the required details in the fields, click Next to proceed. 18. In the Choose Audit Type wizard, select the Thorough Password Audit radio button and click Next. 19. In the Reporting Options wizard, select the Generate Report at End of Auditing option and ensure that the CSV report type radio button is selected. Click the Browse... button to store the report in the desired location. 20. The Choose report file name window appears; select the desired location (here, Desktop) and click Save. 21. In the Reporting Options wizard, the selected location to save the file appears under the Report File Location field; click Next. 22. The Job Scheduling wizard appears. Ensure that the Run this job immediately radio button is selected and click Next. 23. Check the given details in the Summary wizard and click Finish. 24. L0phtCrack starts cracking the passwords of the remote machine. In the lower-right corner of the window, you can see the status. It will take some time to crack all the passwords of a remote system. Provide a screenshot of this. 25. After successfully attaining weak and strong passwords, as shown in the screenshot, you can click the Stop button in the bottom-right corner of the window. 26. You can use the L0phtCrack tool for auditing the system passwords of machines in the target network and later enhance network security by implementing a strong password policy for any systems with weak passwords. 27. This concludes the demonstration of auditing system passwords using L0phtCrack. 28. Compile your screenshots in MS Word. 29. Let your instructor check your progress before submitting a PDF copy on eLMS.
