VerifyUserLoginTest

```
VerifyUserLoginTest.java x PayrollCalculatorTest.java x
Source History
1 package test;
2
3 import loginmodule.VerifyUserLogin;
4 import org.junit.Test;
5 import static org.junit.Assert.*;
6
7 public class VerifyUserLoginTest {
8
9     @Test
10     public void testVerifyUserLoginCredentials() {
11         System.out.println("verifyUserLoginCredentials method");
12         VerifyUserLogin instance = new VerifyUserLogin();
13
14         String inputUserName = "testuser";
15         String inputPassword = "testpass";
16         boolean expectedResult = true;
17         boolean result = instance.verifyUserLoginCredentials(inputUserName, inputPassword);
18         assertEquals(expectedResult, result);
19
20         inputUserName = "invaliduser";
21         inputPassword = "invalidpass";
22         expectedResult = false;
23         result = instance.verifyUserLoginCredentials(inputUserName, inputPassword);
24         assertEquals(expectedResult, result);
25     }
26 }
```

PayrollCalculatorTest

```
VerifyUserLoginTest.java x PayrollCalculatorTest.java x
Source History
1 package test;
2
3 import loginmodule.PayrollCalculator;
4 import org.junit.Test;
5 import static org.junit.Assert.*;
6
7 public class PayrollCalculatorTest {
8
9     @Test
10     public void testGetTotalSalary() {
11         System.out.println("getTotalSalary method");
12         PayrollCalculator instance = new PayrollCalculator();
13
14         double hourlyRate = 100.0;
15         double hours = 40.0;
16         double overtime = 5.0;
17
18         double result = instance.getTotalSalary(hourlyRate, hours, overtime);
19
20         assertEquals(expected: 4750.0, actual: result, delta: 0.0);
21         assertEquals(expected: 4000.0, actual: instance.getRegularPay(), delta: 0.0);
22         assertEquals(expected: 750.0, actual: instance.getOverTimePay(), delta: 0.0);
23     }
24 }
```

RESULTS

The screenshot shows an IDE with two tabs: `VerifyUserLoginTest.java` and `PayrollCalculatorTest.java`. The `VerifyUserLoginTest.java` tab is active, displaying the following code:

```
1 package test;
2
3 import loginmodule.VerifyUserLogin;
4 import org.junit.Test;
5 import static org.junit.Assert.*;
6
7 public class VerifyUserLoginTest {
8
9     @Test
10     public void testVerifyUserLoginCredentials() {
11         System.out.println("verifyUserLoginCredentials method");
12         VerifyUserLogin instance = new VerifyUserLogin();
13
14         String inputUserName = "testuser";
15         String inputPassword = "testpass";
16         boolean expectedResult = true;
17         boolean result = instance.verifyUserLoginCredentials(inputUserName, inputPassword);
```

The `Test Results` pane at the bottom shows the results for `test.VerifyUserLoginTest`. A green bar indicates "Tests passed: 100.00 %". Below this, it states "The test passed. (0.221 s)". The output pane on the right shows "verifyUserLoginCredentials method".

The screenshot shows the same IDE with the `PayrollCalculatorTest.java` tab active. The code is as follows:

```
1 package test;
2
3 import loginmodule.PayrollCalculator;
4 import org.junit.Test;
5 import static org.junit.Assert.*;
6
7 public class PayrollCalculatorTest {
8
9     @Test
10     public void testGetTotalSalary() {
11         System.out.println("getTotalSalary method");
12         PayrollCalculator instance = new PayrollCalculator();
13
14         double hourlyRate = 100.0;
15         double hours = 40.0;
16         double overtime = 5.0;
```

The `Test Results` pane shows results for `test.PayrollCalculatorTest`. A green bar indicates "Tests passed: 100.00 %". Below this, it states "The test passed. (0.252 s)". The output pane on the right shows "getTotalSalary method".
