

Displays the password in plain text:

The screenshot shows a Parrot Security 4.10 terminal window. The user has executed the command `$sudo su` to become root. The prompt is `[root@parrot]~`. The user has then executed `#pluma hash.txt` and `#john hash.txt`. The terminal output shows the following steps:

```
[root@parrot]~#pluma hash.txt
[root@parrot]~#john hash.txt
Created directory: /root/.john
Using default input encoding: UTF-8
Loaded 1 password hash (netntlmv2, NTLMv2 C/R [MD4 HMAC-MD5 32/64])
Will run 2 OpenMP threads
Proceeding with single, rules:Single
Press 'q' or Ctrl-C to abort, almost any other key for status
Almost done: Processing the remaining buffered candidate passwords, if any.
Warning: Only 1 candidate buffered for the current salt, minimum 8 needed for performance.
Proceeding with wordlist:/usr/share/john/password.lst, rules:Wordlist
qwerty (Jason)
lg 0:00:00:00 DONE 2/3 (2026-03-21 10:49) 14.28g/s 95571p/s 95571c/s 95571C/s 123456..random
Use the "--show --format=netntlmv2" options to display all of the cracked passwords reliably
Session completed
[root@parrot]~#
```

The password `qwerty` has been cracked and displayed in plain text. The terminal window also shows a menu bar with 'Applications', 'Places', 'System', and 'Parrot Terminal'. The status bar at the bottom shows 'Menu', 'Parrot Terminal', and 'Parrot Terminal'.
